iTernity

Software-Defined Archiving

UNCHAIN YOUR ARCHIVE DATA!

SECURE DATA MANAGEMENT WITHOUT LIMITATIONS

Proprietary archiving systems still represent a challenge for many IT departments and cause dependencies, lock-ins, stressful data migrations, high efforts and unused capacities. The Software-Defined Archiving approach helps you to overcome the limitations of legacy data silos and break the dependency of proprietary APIs.

HARDWARE INDEPENDENT

FUTURE-PROOF

FLEXIBLE

EASY DATA MIGRATIONS

SOFTWARE-DEFINED ARCHIVING INSTEAD OF HARDWARE SILOS

Hardware-independent, based on open standards and x-86 hardware

Easy and secure data migrations

Support of DAS-, NAS-, SAN-, object- and cloud storages

Optimal integration into your IT infrastructure

Data integrity protection and automatic self-healing

140+ validated business applications (ERP, ECM, DMS, PACS, …)

**Over 50% cost savings compared to public cloud storage and proprietary systems**

Strong partnerships and globally available via HPE Complete & HPE GreenLake

INDEPENDENT, OPEN AND FUTURE-PROOF

Software-Defined Archiving decouples the software intelligence from the physical hardware, thus protecting your IT investments in the long term and leveraging your archive to a new level.

The advantage of our software-defined approach is our focus on industry standards, x86 hardware and open interfaces. iTernity solutions are therefore extremely flexible, independent and cost-efficient.

- iCAS is a middleware for retention management and WORM archiving. The software integrates in your existing IT infrastructure and adds compliance, data integrity protection and long-term availability.

- iCAS FS is a scale-out archiving platform and enables future-proof data storage and compliance at low TCO. Thanks to the zero-touch operation and integrated monitoring of the whole set-up, your IT has no efforts with the archiving system.
