SIMPLY RELIABLE: BACKUP & RECOVERY WITH VEEAM & ITERNITY

Ransomware, data loss, data growth, increasing IT complexity... Data protection challenges are bound to create new worry lines for IT managers. Backup software and storage infrastructure choices are crucial in the fight against data loss and ransomware. Make your data protection fit for the future with Veeam & iTernity and reduce complexity, costs and effort!

IMMUTABLE STORAGE
AGAINST RANSOMWARE

START SMALL,
GROW FLEXIBLY

MANAGED SERVICES,
EASY TO USE

ONE PLATTFORM,
MANY USE CASES

BETTER TOGETHER: VEEAM & ITERNITY

iCAS FS is „Veeam Ready“ qualified and can be deployed as Performance Tier and Capacity Tier. With Veeam Backup & Replication and iTernity iCAS FS you are prepared for all backup and recovery scenarios – reliable, simple & cost-efficient!

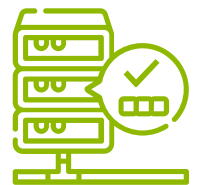

YOUR OPPORTUNITIES WITH ICAS FS

1 PERFORMANCE TIER

As an on-premises Performance Tier, iCAS FS ensures performance, high availability and security for your backups. iCAS FS prevents encryption, manipulation, or accidental deletion, and ensures persistent clean copies for reliable recovery.

With the new Veeam v12, backup data can be written to the immutable object storage iCAS FS without any intermediate step (**direct-to-object**). Thanks to Object Lock, your data is immutable and safe from ransomware attacks. The closed system minimizes the IT attack surface and protects your backups, archive data and more – without additional costs and licenses.

2 CAPACITY TIER

iCAS FS can be used as an extension of your primary storage (capacity tier) via **S3 interface**. This brings on-premises performance and data protection with maximum scalability and flexibility. Reduce your **total cost of data storage** by 53% compared to the public cloud, lower your **IT effort** by over 61%, and eliminate the complexity of backup storage.

3 MICROSOFT 365 BACKUP

With Veeam Backup for Microsoft Office 365 (VBO) and iCAS FS, you can back up your Office 365 data easily, flexibly and cost-effectively. From VBO, Office 365 backups are stored directly on-premise in iCAS FS.

Veeam recommends an object storage target for storing Microsoft 365 backups, which saves an average of **50% of storage capacity** and provides better performance.

iCAS FS covers backup use cases (storage for Veeam Backup & Replication, backup of Microsoft 365) as well as audit-proof archiving, healthcare data storage from HIS & PACS and secondary storage – without data silos and complexity.
