CAPTURE DATA DIRECTLY AT THE SOURCE AND ARCHIVE IT SEAMLESSLY

iCAS Capture extends your archiving strategy by enabling direct data capture from a variety of sources. This add-on automatically extracts relevant information and associated metadata and seamlessly integrates it into iCAS FS and/or iCAS Classic shares. Data is securely and compliantly archived, enabling it to be safely removed from production systems and reducing operational effort, storage demands and complexity.

This enables you to connect extra data sources to your existing archiving infrastructure, eliminating the need for manual intermediate steps or complex customisations.

YOUR RESULT

Maximum security, greater efficiency and an archiving solution that integrates seamlessly into your processes.

MORE SECURITY. LESS EFFORT. NO COMPROMISES.

With iCAS Capture, your archive can play an active role in your data strategy. Relevant information is captured directly at the source, independently of applications, and remains securely archived, eliminating the need for additional transfer processes.

This reduces manual effort and eliminates media discontinuities and human error, providing full transparency and control over your data from creation to long-term retention.

iCAS Capture turns your archive into an active information management system, giving you greater control over your data, whatever your industry or IT environment.

YOUR BENEFITS AT A GLANCE

CAPTURE DATA AUTOMATICALLY

Data and metadata is captured directly at the source and automatically archived in iCAS Classic and/or iCAS FS.

SINGLE SOURCE OF TRUTH

Centralized and traceable data management creates transparency and a reliable information foundation.

ELIMINATE HUMAN ERRORS

Automated export and transfer processes reduce manual errors and ensure consistent archiving workflows.

RELIEVE PRODUCTION SYSTEMS

Archived data can be removed from the source, improving system performance and reducing storage requirements.

INTEGRATE SEAMLESSLY

Seamless integration into existing archiving infrastructures and established archiving processes.

ENSURE COMPLIANCE

Tamper-proof archiving without media discontinuities or data gaps for regulatory compliance and legal certainty.
